An Introduction to Gas Chromatography Mass Spectrometry

A mass spectrometer is an analytical instrument that produces a beam of gas ions from samples (analytes), sorts the resulting mixture of ions according to their mass-to-charge (m/z) ratios using electrical or magnetic fields, and provides analog or digital output signal (peaks) from which the mass-to-charge ratio and the intensity (abundance) of each

Basic Gas Chromatography-Mass Spectrometry: Principles and ...

Gas Chromatography Mass Spectrometry (GC/MS), is considered the gold standard in determining what drug and at what concentration is within a donor's sample. GC/MS is commonly used as a confirmatory test of other, less expensive, types of drug testing methods, such as immunoassay testing, because GC/MS is highly reliable and capable of being upheld in a court of law.

Gas Chromatography-Mass Spectrometry

Mass spectrometry (MS) is an analytical chemistry technique that helps identify the amount and type of chemicals present in a sample by measuring the mass-to-charge ratio and abundance of gas-phase ions. A mass spectrum (plural spectra) is a plot of the ion signal as a function of the mass-to-charge ratio.
