Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a=0$), but rather, are in static equilibrium with their environment. The application of Newton's second law to a system gives: $\Sigma F = 0$. Where bold

Mechanics Statics

(physics) - Wikipedia

1.1 INTRODUCTION.

Mechanics is the physical science concerned with the behaviour of bodies that are acted upon by forces.. Statics is the study which deals with the condition of bodies in equilibrium subjected to external forces.. In other words, when the force system acting on a body is balanced, the system has no external effect
