The legality of Library Genesis has been in question since 2015 because it allegedly grants access to pirated copies of books and paywalled articles, but the site remains standing and open to the public.

**Java Print Document**  
In Java, the print () and println () methods vary in the manner that, when using println (), in the output screen the cursor will be shown on the next line after printing the required output on the screen. Basically we can understand 'ln' in 'println' as the 'next line'. But in print (), in the output screen the cursor will be shown on the same line after printing the required output on the screen.

**Print() and Println() Methods in Java**  
An application invokes the static methods of the abstract class PrintServiceLookup to locate print services that have the capabilities to satisfy the application's print request. For example, to print a double-sided document, the application first needs to find printers that have the double-sided printing capability.
