Mercruiser Freshwater Cooling Kits - Go2marine

The heat exchanger is the heart of the closed cooling system. It uses raw lake or ocean water brought in from the raw water pump to act as coolant for the engines circulating water. The circulating water runs in a closed loop through the engine only in a half system and in a full system, the exhaust manifold as well.

Marine Closed Cooling Systems - CP Performance

Marine Fresh Water Cooling systems are similar to the cooling system in an automobile however rather than a radiator they utilize a heat exchanger, and rather than using air to remove the
