A demand schedule is a listing that shows the quantity demanded at all possible prices that might prevail in the market at a given time. By looking at a demand schedule, we can see at what point consumers consider the price of the product is too high and what prices would increase a consumer's demand for the product.

In this unit, we apply the concepts of supply and demand to markets for factors such as labor, capital, and land. We analyze the concept of derived demand, understand how a factor's marginal product and the marginal revenue product affect the demand for the factor, and consider the role of factor prices in the allocation of scarce resources. By studying the determination of factor prices, we ...

Productivity is the efficiency of production of goods or services expressed by some measure. Measurements of productivity are often expressed as a ratio of an aggregate output to a single input or an aggregate input used in a production process, i.e. output per unit of input, typically over a specific period of time. The most common example is the (aggregate) labour productivity measure, e.g ...
